## ABSTRACT

UNIVERSITY MANAGEMENT SYSTEM (UMS) deals with the maintenance of university, college, faculty, student information within the university. UMS is an automation system, which is used to store the college, student, courses, faculty and information of a college. Starting from registration of a new student in the college, it maintains all the details about the student and courses of the students. It also deals with the attendance of the students and the results of each student. The attendance and marks are updated by the registered faculty only and only admin user can change those details. This project mainly deals with the retrieval of information through an INTRANET based campus wide portal. It collects related information from all the departments of an organization and maintains files, which are used to generate reports in various forms to measure individual and overall performance of the students.

## LANGUAGE OF IMPLEMENTATION

HTML5, CSS, JAVASCRIPT, MYSQL, PHP

# 1. INTRODUCTION

## 1.1 Motivation

In the manual system its takes to much time for any process and also get the information from the manual system is very tuff to solve this type of problem we developed this software using this software work done very fast and less amount of error occurs, information is save into to the software is very good and is very secure they do authentication for every use. The "University Management System" is an improved Student Service, increase information sharing and providing Teacher facilities. It can handle all details about a student. The details include Online course Offering, Seat allocation, student take their course by own. Student management system is managed by a Department. It is the job of the Department to insert update and monitor the whole process.

Here comes the management system of the web page and managing the pages. The system will serve the management to reduce cycle times, faster keep track of data, and improve the service, increase information sharing and providing facilities to store information centrally. I was fortunate and blessed to get this lucky break to work with this appreciable project. My earnest thanks, gratitude and salutations to those respectable people from the deep down inside my heart to make the part of this appreciable project and give me such nice opportunity. The system will do the following activities:

- Result View by Admin
- Registration of new student as well as faculty.
- Enrols Courses by Admin
- Show Departmental wise course
- Update details
- Maintain the attendance

## 1.2 Issues

i. To manage huge number of students ii. To regularly update the attendance of each students iii. To update the marks
iv. To store each student personal information

# CHAPTER 2

# PROBLEM DEFINITION

## 2.1 CRITICAL ISSUES

The Existing system doesn't fulfill the following activities.

- The present system executes all features in manual, it takes lot of time.
- The system maintains all the records in computer with Microsoft Excel.
- There is lack of security, accreditation and low quality and also any people can change the record manually because there is no security in manual system.
- The existing system requires a lot of laborious work.
- Maintaining these records as files may turn out to be a costlier task for the university.

## 2.2 PROBLEM DEFINITION

Reducing the complexity of the system and maintain the large information of the data. This system maintains the student data it is very important to take care of this data and always look into that the data can't be lost. It's also do the registration process of new student for that maintain the data is very important and also take care the new student data is important for the university. The main thing is that security here , the authorized user can only access to the data is very important to verify every user.

# CHAPTER 3

# PROJECT DESCRIPTION

## 3.1 List of Modules

This system maintains the information about student and faculty through this three following modules:

- Admin login  Faculty login
- Student login
- Registry
- Attendance
- Results

## 3.2 Requirements Specification

### 3.2.1 Software Requirements ➢

Tools: Sublime Text, Edit plus.

- ➢ Front-End Tool: PHP,
- ➢ Back-End Tool: MySQL Server

### 3.2.2 Hardware Requirements

- ➢ Processor: Pentium Processor
- ➢ Storage: 80 GB
- ➢ Memory: 1 GB RAM
- ➢ Network Adapter: Ethernet Adapter
- ➢ Modem: 128kbps

### 3.3 Module Description

**1. Admin login:-**

In this admin login admin can view all the information of the student and also can do a search of some particular student or delete student and can also edit student details.

The admin can also view the student result and add the student result, admin can also modify and update the result of the student.

Admin can also modify the attendance or give the attendance to the student and also can view the attendance to a date through is login.

Admin can also view all the faculty details through is login.

**2. Faculty login:-**

For login as a faculty they have to do the registration process through the faculty registration form, after the registration is successfully done faculty can login to the portal and can give the attendance to the student and they can also view the attendance for a particular date and they can also update the previous attendance through their login.

**3. Student login:-**

For login student have to register to the portal after the registration process is successfully completed they can login to the page and they can edit their profile, like they can upload their profile picture to their profile and they can also edit their details, they can change their password or they can also view their result through their login.

**4. Registry:-**

In the registry menu we have two option one is add student through that we can add the student and another is add faculty through that we can add faculty.

**5. Attendance:-**

Under this section the registered faculty can post the attendance of the students, who all are present and who all are absent in the class, and any updation of the attendance can be only done by the admin.

**6. Results:-**

Under this section the admin can post the results of each and every students.

## CHAPTER 4

## IMPLEMENTATION OF PROJECT

### 4.1 Sample CODE

**admin.php**

```
<?php
session_start();
        require "php/config.php";
        require_once "php/functions.php";
        $user = new login_registration_class();
        $admin_id = $_SESSION['admin_id'];
        $admin_name = $_SESSION['admin_name'];
        if(!$user->get_admin_session()){
        header('Location: index.php');
                exit();
        }
?>
<?php
$pageTitle = "Admin"; include
"php/headertop_admin.php";
?>

# CHAPTER 6

## CONCLUSION:-

So basically in our project we have created the website for the JAS UNIVERSITY where the student, faculty and admin can login into the website and interact with each other. The various tasks that this portal performs are like student can register through the website, faculty can give the attendance and faculty can also register through the webpage, admin can update, delete the information of the student admin can upload the result of the student and student can view the result through the login. By using this portal the university can decreased the manual work progress so that the work can be done easily and in time.

## FUTURE WORKS:

For future development we are trying to convert web based application to android based application, so that can be easily accessible from anywhere and also we will upgrade the applications.
